

The IS-Mix™

A faster way to clear your mine

The slightest sound when approaching a modern sea mine can trigger an explosion. It's for these circumstances we have created our semi-closed rebreather the IS-Mix. A perfectly balanced and complete mine clearance system with outstanding RAM* attributes. Being intuitive and fast to prepare, yet highly capable, the IS-Mix enables a diver to be in the water in less than 20 minutes. With supreme breathing and diving comfort the diver can operate in any orientation and, thanks to its great magnetic signatures and lack of noise, swim to work undetected.
