

Add-on connection available for Divator DP1 surface supply

Robust shockproof design with rubber cover

Up to four low pressure outputs, adjustable for improved ergonomics

Dive computer can be connected to the high pressure output

Available with DIN or Yoke cylinder connection

Can be used with single cylinder or cylinder pack

Safety pressure to ensure no freezing

The Divator™ RS4 Regulator

Getting you into the cold without ever freezing

An ever-present danger of cold water diving is the regulator freezing, causing a life threatening free flow. As a professional, you know what precautions to take to be as safe as possible, but there will always be factors you can't control. That's why we're putting an end to this risk once and for all with our new regulator, using safety pressure to ensure that no freezing occurs – no matter the conditions.
