

Interspiro's new rebreather delivered to the Danish Navy

On December 1st Interspiro delivered the very first batch of their new rebreather system "IS-MIX" to the Royal Danish Navy ("Kongelige Danske Marine").

The IS-MIX is a demand controlled semi-closed breathing system for military use. The IS-MIX has a very low magnetic profile and a very low acoustic signature, both which are essential elements when developing breathing apparatuses for mine clearance operations.

The IS-MIX is a mechanical rebreathing system that is extremely simple to prepare for use and to operate. Apart from excellent magnetic signatures and acoustic qualities, the safety aspect has been given high priority in the design of the IS-MIX.

The new IS-MIX is based on the well-proven concept of Interspiro's previous rebreather models, the ACSC and the DCSC. Both which have been in operation for over 30 years and have an excellent track record.

About Interspiro

Interspiro develop, manufacture and market respiratory and auxiliary equipment for fire fighting, work in hazardous environments and professional diving. Customers are rescue services, military organisations, industries, utilities, shipping and diving companies around the world. Interspiro has its main office in Sweden with subsidiaries in the USA, United Kingdom, the Netherlands, Germany, Switzerland, Austria and Malaysia. Interspiro is an Ocenco group company. The Ocenco group ranks among the World's largest respiratory protection companies.
