

The lightweight and compact design allows for rapid deployment

Simplified control panel, allows the attendant focus on the safety of the diver

Possible to change supply cylinder or cylinder package during the operation, for long duration dives

A thin communication cable can be wrapped around the hose

Doubles as a safety rope

Available in lengths up to 120 meters

Integrated regulator, no need for manual adjustment of pressure for various depths

The small diameter of the lightweight supply hose greatly reduces resistance in strong currents

## The Divator™ DP1

# The right kind of pressure for professional divers

Nothing beats surface supply diving in regards to safety. But bulky hoses and complicated systems, makes it a hassle for both divers and attendants. To simplify things, we designed the world's first high pressure surface supply system. With the hose weighing in at just a fraction of a traditional low pressure hose, it's much quicker and easier to handle. And since the regulator is incorporated with the diver's equipment, there is no need for the attendant to manually adjust the pressure – letting the whole team focus on the mission at hand.
