

Divator Full Face Mask accepts most diving communication systems and affords the diver excellent vision and breathing with both mouth and nose

Rated to 60 metres or more

Can be stored fully prepared for immediate use

Weighted bellows deliver the correct dosage of fresh gas into the breathing circuit and enables the diver to breathe easy in any position

The harness is ergonomically designed for enhanced comfort and safety

Breathable gas that can be used in an emergency

The IS-Mix™

A faster way to clear your mine

The slightest sound when approaching a modern sea mine can trigger an explosion. It's for these circumstances we have created our semi-closed rebreather the IS-Mix. A perfectly balanced and complete mine clearance system with outstanding RAM* attributes. Being intuitive and fast to prepare, yet highly capable, the IS-Mix enables a diver to be in the water in less than 20 minutes. With supreme breathing and diving comfort the diver can operate in any orientation and, thanks to its great magnetic signatures and lack of noise, swim to work undetected.
