

Washing cylinder for SCBA, 0.35 L

During machine washing with standard cylinders, "flush shadows" may occur where the machine cannot clean properly. Because the washing cylinder is much smaller, the problem with flush shadows disappears, which leads to a better washing result and reduces the risk of soot and deposits remaining in the space between the harness and the cylinder.

With its light weight and flexible size, it also facilitates handling and improves the working environment when machine cleaning SCBAs.
